1. Solve each of the problems below.

a.
$$\begin{array}{r} 500 \\ - 327 \\ \hline \end{array}$$

b.
$$\begin{array}{r} 305 \\ - 111 \\ \hline \end{array}$$

c.
$$\begin{array}{r} 2001 \\ - \quad 3 \\ \hline \end{array}$$

d.
$$\begin{array}{r} 199 \\ + 199 \\ \hline \end{array}$$

e.
$$\begin{array}{r} 399 \\ + 57 \\ \hline \end{array}$$

f.
$$\begin{array}{r} 2562 \\ + 3239 \\ \hline \end{array}$$

g. $\frac{1}{4}$ of \$2.80

h. 15% of 420

2. List the strategy you used to solve each problem.

Students who are computationally fluent ...

- select and use a variety of methods and tools to compute, including objects, mental computation, estimation, paper and pencil, and calculators.
- work flexibly with basic number combinations for adding, subtracting, multiplying, and dividing.
- use visual models, benchmarks, and equivalent forms when adding, subtracting, multiplying, and dividing whole numbers and fractions.

GOAL: Students are able to compute efficiently and accurately.

NEED: MEANINGFUL practice.

The Bridge to Ten Strategy Pre-activities

The Bridge to Ten Strategy Pre-activities

Activity 3 Dominoes—Total the Ends

How to play:

- Challenge each student to select four dominoes at random and take turns to arrange the tiles as shown below, so the total number of dots on the outer ends is a multiple of five. The number made is that player's score. No points are scored if a multiple of five cannot be made.

Several scores are possible with the tiles above, but the greatest possible score is 20 as shown. The first player to reach 100 points wins the game.

Variation

If one player cannot make a scoring arrangement with their tiles and another player can, the second player scores the relevant number of points.

Adapted from 'Number Concept Activities' in *A Little Book of Big Ideas: Dominoes*, Calvin Irons (ORIGO Education, 2007).

The Bridge to Ten Strategy Reinforce

WARM UP **11**

Name: _____

Jade had 9 girls and 6 boys at her party.
How many guests in all?

1. a. These ten-frames show 9 counters.
Draw 6 more counters.

- b. Write the total. _____

What did you notice?

- c. Complete the sentence.

$9 + 6$ is the same as $10 +$ _____

2. a. These ten-frames show 8.
Draw 4 more counters.

- b. Write the total. _____

- c. Complete the sentence.

$8 + 4$ is the same as $10 +$ _____

The Bridge to Ten Strategy Reinforce

WORK OUT 11

Name: _____

1. Draw more counters then complete the sentence.

a. Draw 7 more

WORK OUT **6**

1. For each of these, draw more counters then complete the sentence.

a. Draw 16 more

29 + _____ is the same as
30 + _____ = _____

b. Draw 17 more

27 + _____ is the same as
30 + _____ = _____

c. Draw 27 more

_____ + _____ is the same as
_____ + _____ = _____

d. Draw 17 more

_____ + _____ is the same as
_____ + _____ = _____

2. For each of these, draw an arrow to a number sentence below that has the same answer. Write the answer.

a. $47 + 18$ b. $68 + 27$ c. $69 + 33$ d. $48 + 26$

$50 + 24 =$ _____ $50 + 15 =$ _____ $70 + 25 =$ _____ $70 + 32 =$ _____

The Bridge to Ten Strategy Extend

WARM UP **6**

Name: _____

Aden bought a camera for \$27
and a film pack for \$18.
How much did he spend in all?

1. a. These ten-frames show
27 counters.
Draw 18 more counters.

- b. Write the total. _____

- c. Complete this sentence to match the picture above.

$27 + 18$ is the same as $30 +$ _____

What do you notice?

2. Use the same method to figure out $148 + 27$ in your head.

Try making a ten.

Complete this sentence to help you.

$148 + 27$ is the same as $150 +$ _____

The Bridge to Ten Strategy Extend

WORK OUT 6

Name: _____

1. For each of these, draw an arrow to a number sentence below that has the same answer. Write the answer.

a. $97 + 38$

b. $128 + 47$

c. $119 + 26$

$130 + 45 = \underline{\quad}$

$100 + 35 = \underline{\quad}$

$120 + 25 = \underline{\quad}$

2. Complete each sentence.

a. $68 + 27$
is the same as
 $70 + \underline{\quad}$

b. $247 + 36$
is the same as
 $250 + \underline{\quad}$

c. $169 + 26$
is the same as
 $170 + \underline{\quad}$

d. $38 + 127$
is the same as
 $\underline{\quad} + 130$

e. $26 + 139$
is the same as
 $\underline{\quad} + 140$

f. $47 + 329$
is the same as
 $\underline{\quad} + 330$

3. For each of these, draw an arrow to the number sentence you could use to figure it out. Write the answer.

a. $138 + 47$

$120 + 65 = \underline{\quad}$

b. $66 + 119$

$170 + 15 = \underline{\quad}$

c. $28 + 157$

$140 + 45 = \underline{\quad}$

d. $168 + 17$

$160 + 25 = \underline{\quad}$

The Bridge to Ten Strategy Extend

Name: _____

WORK OUT **5**

1. For each of these, write an easier number sentence that will help you figure out the problem below. Write the answer.

a.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $4.6 + 3.8 = \underline{\quad}$	b.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $8.9 + 4.3 = \underline{\quad}$	c.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $7.8 + 5.4 = \underline{\quad}$
d.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $1.9 + 6.5 = \underline{\quad}$	e.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $2.8 + 3.6 = \underline{\quad}$	f.	$\underline{\quad} + \underline{\quad} = \underline{\quad}$ SO $9.9 + 6.7 = \underline{\quad}$

2. Write the answers. Place a ✓ above the numbers you adjusted.

a. $6.9 + 8.4 = \underline{\quad}$	b. $5.3 + 7.8 = \underline{\quad}$	c. $8.9 + 4.4 = \underline{\quad}$
d. $7.7 + 8.8 = \underline{\quad}$	e. $6.5 + 3.9 = \underline{\quad}$	f. $4.8 + 4.9 = \underline{\quad}$

3. Add the numbers on the spokes to the number in the center. Write the answers around the outside.

The Bridge to Ten Strategy Extend

Name: _____

WORK OUT **5**

1. Adjust each of these to make a new sentence that is easier to figure out. Write the answer.

a. $23.9 + 15.6$
is the same as
_____ + _____ = _____

b. $42.7 + 14.8$
is the same as
_____ + _____ = _____

c. $31.8 + 16.9$
is the same as
_____ + _____ = _____

d. $53.8 + 24.7$
is the same as
_____ + _____ = _____

2. Write the answers. Place a ✓ above the numbers you adjusted.

a. $24.3 + 13.9 =$ _____ b. $16.8 + 31.7 =$ _____ c. $45.9 + 11.6 =$ _____

d. $32.7 + 15.8 =$ _____ e. $53.9 + 34.8 =$ _____ f. $26.7 + 42.9 =$ _____

3. Add the numbers on the spokes to the number in the center.
Write the answers around the outside.

Key Models for Building Connections

Multiplication

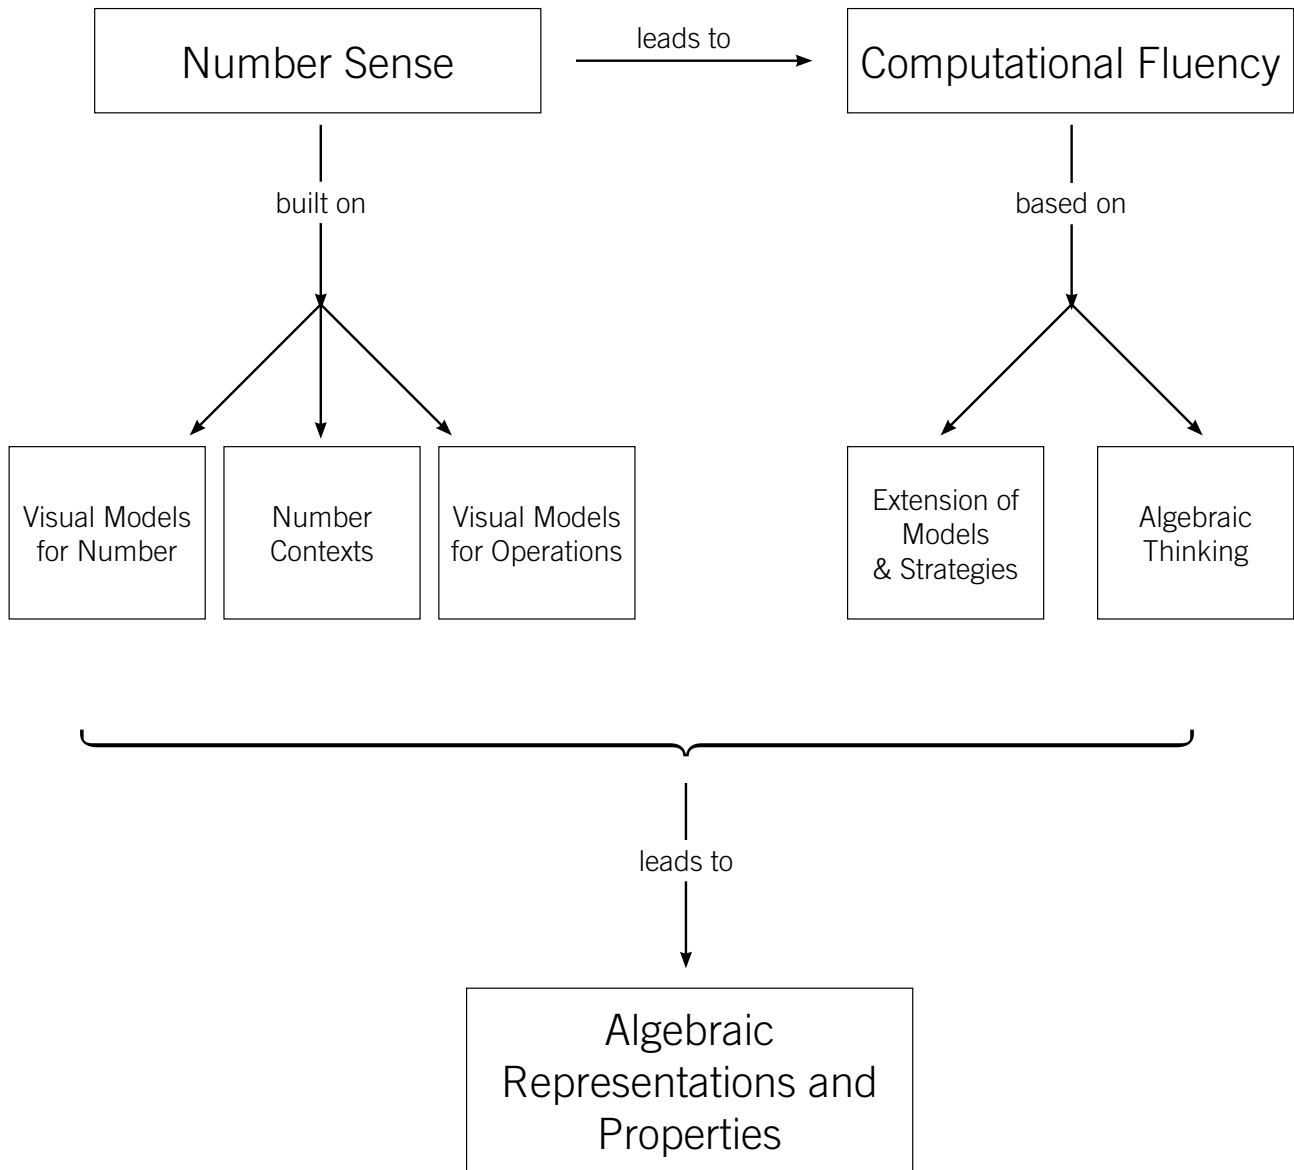

Materials: Copy the ten frames pictures below and on the next page onto overhead transparencies.

Instructions: Show each row of ten frames on the projector, one at a time by turning the projector on and off quickly. If needed show the picture again by quickly turning the projector on and off. Ask the students to tell the total and how they know.

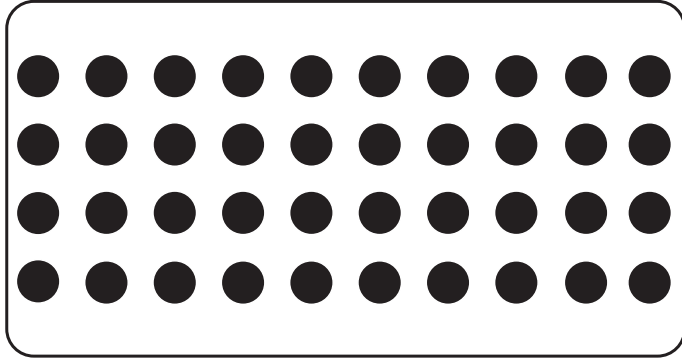

Multiplication

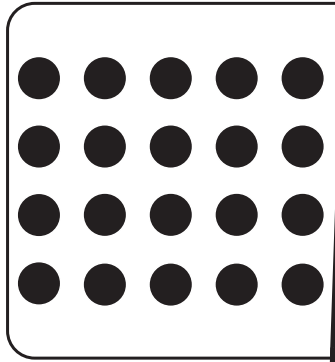

Developing the number facts

- Introduce
 - Use key visual models
- Reinforce
 - Link concrete, pictorial, verbal, and symbolic representations
- Practice
 - Build fluency through fun meaningful activities
- Extend
 - Apply to numbers beyond the basic number facts

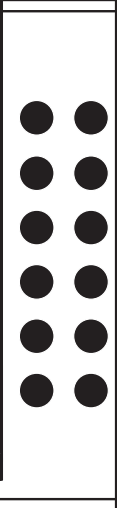

$4 \times 10 = \underline{\quad}$
 $10 \times 4 = \underline{\quad}$

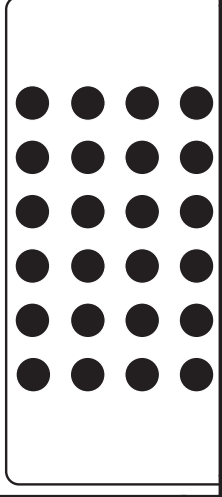

$4 \times 5 = \underline{\quad}$
 $5 \times 4 = \underline{\quad}$

$2 \times 6 = \underline{\quad} = 6 \times 2$

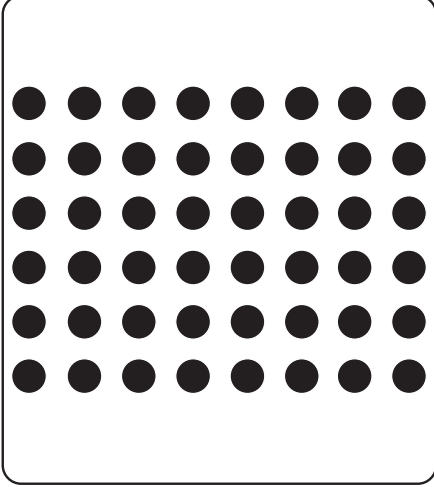

$2 \times 6 = \underline{\quad} = 6 \times 2$

$4 \times 6 = \underline{\quad} = 6 \times 4$

$2 \times 6 = \underline{\quad} = 6 \times 2$

$4 \times 6 = \underline{\quad} = 6 \times 4$

$8 \times 6 = \underline{\quad} = 6 \times 8$

Nice and Easy

Using doubling and halving to multiply

2 or 3 players

Purpose

In this game, the students are required to double and halve two factors to make a number sentence that is easier to calculate. In doing this, the students discover that the product remains unchanged. This is an efficient multiplication strategy when at least one factor in the equation is even.

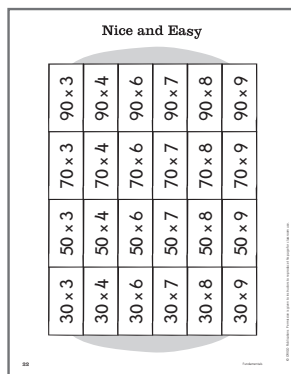

Materials

Each group of players will need

- A 'Nice and Easy' game board (page 22) as shown below.
- Two (2) number cubes made from blank wooden cubes. One cube should show the numerals 15, 15, 25, 35, 45, and 45. The other cube should show 6, 8, 12, 14, 16, and 18.

Each player will need

- Fifteen (15) counters (a different color for each player).

The game board is a 4x4 grid of multiplication problems. The title 'Nice and Easy' is centered at the top. The grid contains the following multiplication sentences:

30 x 3	50 x 3	70 x 3	90 x 3
30 x 4	50 x 4	70 x 4	90 x 4
30 x 6	50 x 6	70 x 6	90 x 6
30 x 7	50 x 7	70 x 7	90 x 7
30 x 8	50 x 8	70 x 8	90 x 8
30 x 9	50 x 9	70 x 9	90 x 9

How to Play

The aim is to arrange three counters adjacently in a horizontal, vertical, or diagonal line.

- The first player rolls the number cubes.
- The player says the multiplication sentence represented by the cubes, then doubles one factor and halves the other to figure out an equivalent sentence.

Example: Lincoln rolls 35 and 16. He says, 35 times 16 is the same as 70 times 8.

- The player states the product before claiming a corresponding space on the game board by covering it with a counter. If the space is unavailable, the player misses a turn.

Example: Lincoln says, The answer is 560, and claims 70 x 8 on the game board.

- The other player(s) has a turn.
- The first player to make a line of three adjacent counters is the winner.

Reading the Research

There are different ways that students can be encouraged to move from inefficient to efficient thinking strategies. One technique is to talk about slightly more advanced procedures and why they work (Fuson & Kwon, 1992).

Before the Game

Draw an array for 15×8 on an overhead transparency as shown (right). Show the transparency and ask the students to write a number sentence to match what they see (15×8). Call upon a student to share his or her number sentence as you run your finger along the length and one side of the array to check. Ask the students if they can easily calculate the total number of squares in the array. If not, cut the array in half and rearrange the two pieces to make a new array as shown (right). Ask, *Have I changed the total number of squares in the array?* (No.) *What is the new number sentence you see now?* (30×4 .) *Is it easier to calculate the total number of squares now?* (Yes.) Make sure the students see that by cutting and rearranging the original array, one dimension (factor) is doubled and the other is halved.

15×8

30×4

During the Game

Encourage the students to explain the strategy they use to find the answers. Different players will use different strategies. For example, after figuring out that 35×16 is the same as 70×8 , the following players gave these explanations:

Lincoln: *I knew 7 times 8 is 56 so 7 tens times 8 must be 56 tens or 560.*

Letitia: *I just doubled 70 then doubled and doubled again.*

Lindsay: *I knew 70 times 10 is 700, so 70 times 8 must be 140 less.*

After the Game

Lead a discussion about the strategy introduced in the game. Ask, *Did you find this strategy easy (or difficult) to use? Why was it easy (or difficult)?*

Challenge the students to write some number sentences they think they can solve using a doubling and halving strategy. Do the students see that it does not work easily when both numbers are odd?

90	150	210	270
120	200	280	360
180	300	420	540
210	350	490	630
240	400	560	720
270	450	630	810

Beyond the Game

The students can play the same game using a different game board. Give them a copy of 'Nice and Easy Too!' on page 23 (illustrated). This time, the students say the equivalent multiplication sentence and cover the answer.

Nice and Easy

30×3	50×3	70×3	90×3
30×4	50×4	70×4	90×4
30×6	50×6	70×6	90×6
30×7	50×7	70×7	90×7
30×8	50×8	70×8	90×8
30×9	50×9	70×9	90×9

Nice and Easy Too!

90	150	210	270
120	200	280	360
180	300	420	540
210	350	490	630
240	400	560	720
270	450	630	810
