

Appendix 3

Stepping Stones Implementation Tool

ORIGO
STEPPING STONES 2.0
COMPREHENSIVE MATHEMATICS

*Implementation
Tool*

Introduction and purpose

ORIGO Stepping Stones is a comprehensive elementary (K–6) mathematics program that makes learning mathematics meaningful, enjoyable, and accessible for all teachers and their students. *Stepping Stones* makes intentional use of:

- conceptually based instruction;
- language and discourse;
- critical thinking to apply mathematics in context;
- visual representations;
- strategy-based fluency development;
- coherent spaced teaching and practice; and
- the *Stepping Stones* suite of resources

to facilitate effective teaching and engaging learning to cultivate mathematically proficient teachers and students.

The purpose of the *Stepping Stones* Implementation Tool (SSIT) is to provide District and/or School Implementation Teams with an efficient measure of the extent to which school personnel are applying the core elements of the *Stepping Stones* program in classrooms.

This tool is intended to be used over time to guide implementation planning of the *Stepping Stones* program. This tool is not intended to be used to evaluate teacher performance but to inform the actions of District and/or School Implementation Teams.

Intended participants

Members of District and/or School Implementation Teams (see pages 4–6 of the *Stepping Stones 2.0 Implementation Handbook*) should complete the SSIT.

Administration

Teams complete the SSIT using a sampling of classrooms up to three times each year (fall/winter/spring). The teams use the data collected to set and monitor annual and quarterly implementation goals.

To complete the SSIT, District and/or School Implementation Teams review documents, including student work samples, conduct classroom observations, and interview teachers implementing the *Stepping Stones* program. Teams may use the Interview Protocol (Appendix A) and the Student Journal Review Protocol (Appendix B) to support data collection. Specific *Stepping Stones* resources that support the indicators are listed on the form. Teams use this information to rate each implementation indicator as “Fully in place,” “Mostly in place,” “Somewhat in place,” or “Not yet in place” using a scale of 3, 2, 1, 0. To support the team, Appendix C provides a glossary of terms used in the SSIT.

This tool also provides examples of the types of evidence suggested for rating implementation indicators (for example, observations, lesson plans, teacher interviews). Teams are required to review at least one source of evidence before scoring each implementation indicator. They identify sources of evidence by placing a check mark or circling the types of evidence used for the rating.

Teams should look at aggregate data from across the school for each core component of the program. In this way, teams may identify areas of strength and need, set goals, and develop an action plan to improve implementation.

SSIT use

After the District and/or School Implementation Teams complete the SSIT, they set short-term and long-term goals to improve implementation levels across the district and/or school. Teams can use the action planning form provided in Part III of this guide as a resource when they develop their action plans.

Section C: Instruction

	Core component	Implementation Indicators	Type(s) of evidence (check)	Related <i>Stepping Stones</i> resources	Fully in place (3)	Mostly in place (2)	Somewhat in place (1)	Not in place (0)		
6	Instructional delivery	6.6 Guides students to complete Student Journal sections <i>Step In</i> (to summarize the lesson), <i>Step Up</i> (to check for individual understanding), and <i>Step Ahead</i> (to extend thinking) after Step 3 of the lesson is taught.	Observations ☐	Student Journal						
			Student Journals ☐							
		6.7 Uses Maintaining concepts and skills as a part of daily instruction.	Observations ☐	Student Journal pages (even lessons)						
			Teacher interviews ☐	Fluency practice (Lessons 1, 5, 9)						
			Student work ☐	Problem solving or Investigations (Lessons 3, 7, 11)						
		6.8 Provide feedback and differentiate instruction to meet the needs of each learner through the use of formative assessment data.	Observations ☐	Differentiation tab						
			Teacher interviews ☐	ELL supports						
			Lesson plans ☐	Formative assessment						
			Student work ☐	Coherence						
		Notes:								

Section D: Assessment

	Core component	Implementation Indicators	Type(s) of evidence (check)	Related Stepping Stones resources	Fully in place (3)	Mostly in place (2)	Somewhat in place (1)	Not in place (0)
7	Progress monitoring	7.1 Tracks student learning over time through systematically collecting and monitoring formative and summative data.	Student assessment data ☐	Assessment recording tools				
			Teacher data recording tools ☐					
			Observations ☐					
			Teacher interviews ☐					
		7.2 Uses formative data to inform module planning, lesson planning, and differentiation.	Observation of planning ☐	Pre-tests				
			Student portfolios ☐	Observations and discussions				
			Student assessment data ☐	Journals and portfolios				
			Student work ☐	Digital Student Assessment				
			Teacher interviews ☐					
		7.3 Uses multiple and varied summative data sources to evaluate student learning.	Student assessment data ☐	Performance tasks				
			Teacher records ☐	Check-ups				
			Teacher interviews ☐	Interviews				
			Observations ☐	Quarterly tests				
			Lesson plans ☐	Digital Student Assessment				
			Assessment calendar ☐					

Notes:

Part II: SSIT scoring guide

The SSIT generates scores reflecting the percentage of implementation for each core component of the program. Scores are determined by calculating the percentage of possible points awarded for items in each category of Curriculum, Planning, Instruction, and Assessment.

Category	Items	Points awarded/ possible points	Percentage of <i>Stepping Stones</i> implementation
Curriculum	1.1–3.2	/15	
Planning	4.1–5.5	/33	
Instruction	6.1–6.8	/24	
Assessment	7.1–7.3	/9	
Total	1.1–7.3	/81	

Across time, schools and/or districts monitor progress on *Stepping Stones* implementation by category. Simulated data for a district is depicted in Figure 1. The sample district used the SSIT to assess *Stepping Stones* implementation levels at three different points in time during the first year of implementation, known as the initial implementation stage.

In this example, the District Implementation Team may notice that Assessment has been the lowest category of implementation throughout the initial implementation stage of the *Stepping Stones* program. To improve implementation, the team plans to offer professional development, resources, and additional coaching support related to SSIT indicators 7.1–7.3.

Figure 1. SSIT scores for one district across three administrations during initial implementation

Goal setting

Goal setting is an effective way to keep teams on track and to set districts and schools up for small wins along their implementation journey!

Initial implementation

During the initial implementation stage, teachers are implementing the *Stepping Stones* program for the first time. Teams set specific, measurable, achievable, realistic, and time bound (SMART) annual and quarterly implementation goals for the first year of implementation of the new program. Annual goals are set based on projected levels of implementation. Quarterly goals are set to focus on specific priority areas based on data from the SSIT.

Sample annual implementation goal:

By the end of this school year, 50% of teachers will implement the *Stepping Stones* program at 80% fidelity according to the SSIT.

Sample quarterly implementation goal:

By March 30th, implementation of the Assessment category will increase from 15% to 25% according to the SSIT.

Full implementation

As districts and schools move into the full implementation stage, more teachers are implementing the *Stepping Stones* program as intended. Figure 2 illustrates how the sample district's implementation has improved in year two as they reach full implementation of the *Stepping Stones* program.

Sample annual implementation goal:

By the end of this school year, 75% of teachers will implement the *Stepping Stones* program at 85% fidelity according to the SSIT.

Sample quarterly implementation goal:

By November 30th, implementation of the Curriculum category will increase from 20% to 50% according to the SSIT.

Figure 2. SSIT scores for one district across three administrations during full implementation

SSIT action planning

The SSIT is the basis for action planning. It is designed to facilitate the decision-making of District and/or School Implementation Teams as they identify (a) which categories will be the focus of implementation efforts for the coming quarter or year, known as the priority area(s), and (b) what the specific actions will be, who will lead in completing the action, when the teams expect each action to be completed, and a list of resources needed to complete the actions.

Part III: SSIT action planning form

School system:			School:
Grade level(s):			Date:
Category	Implementation (%)	Priority area rank #1–4	Notes
Curriculum			
Planning			
Instruction			
Assessment			
Total			

Patterns and trends
Directions: As you analyze the SSIT data with your implementation team, identify any patterns or trends that you notice. Consider examining the data by grade level, by indicators, and/or trends over time. Make a bulleted list of any patterns and/or trends in the space provided.
Annual implementation goal:
Quarterly implementation goal:

Directions: When the priority categories have been determined, teams should identify specific indicators of focus to develop an action plan.

Indicator(s) of focus	Actions	Who	When	Resources needed

Appendix A: Interview protocol

The purpose of this document is to provide a list of sample interview questions that can be used to obtain evidence to inform the ratings of the *Stepping Stones* Implementation Tool (SSIT) indicators. Interviewers may decide to ask additional questions based on the responses of the interviewees to prompt more information, if needed.

SSIT Indicator	Interview Question(s) to Elicit Evidence
Curriculum	
1.1	Explain the approach you use to develop conceptual understanding in your math class. How do you use the concrete-pictorial-symbolic model in your instruction?
1.2	How do you use the language stages to develop conceptual understanding of mathematics?
2.1	Explain the stages of strategy development that you use in math instruction?
3.1	How closely do you follow <i>ORIGO Stepping Stones</i> scope and sequence? How do you decide the order of the lessons that you teach?
3.2	How often do you use Maintaining concepts and skills? How do you incorporate spaced learning and practice in your instruction?
Planning – Module	
4.1	Do you plan mathematics collaboratively with your team? If so, how often? Who is involved?
4.2a	When planning for the next module, which <i>Stepping Stones</i> resources do you explore to understand the standards and learning targets you will be teaching?
4.2b	When planning for a <i>Stepping Stones</i> module, which resources do you review to understand and use best practices in your teaching?
4.3a	When planning a module, how do you determine what your students need to know and be able to do by the end of the module? How often do you preview assessments?
4.3b	How do you select and schedule the assessments for each module? How far in advance do you schedule assessments when planning for the module? What tools do you use to record assessment data?
4.4	When planning a module, which <i>Stepping Stones</i> resources do you plan to use? How often do you plan for using the Investigations, Problem solving, Enrichment, Cross-curricular, or Thinking Tasks?

Appendix A: Interview protocol

SSIT Indicator	Interview Question(s) to Elicit Evidence
Planning – Lesson	
5.1	When planning a <i>Stepping Stones</i> lesson, how do you determine the intent of the lesson?
5.2	What is your process for reviewing the lesson to plan for delivery?
5.3	When planning a <i>Stepping Stones</i> lesson, which resources do you review to plan for differentiation?
5.4	How do you plan for including Maintaining concepts and skills in your daily instruction?
5.5	After you develop your plan, what is your process for preparing for instruction? How far in advance do you gather resources?
Instructional Delivery These indicators are best rated through direct observation, but these questions may be used as supplemental information to support a rating.	
6.1	How many continuous minutes of math are your students receiving on a daily basis?
6.2	How do you know the intent of the lesson that you are teaching? How do you communicate the intent of the lesson to your students? At which point/s during the lesson do you communicate the intent? How do you align your instructional materials to the learning target?
6.3	How do you ensure that you are using appropriate math vocabulary during instruction?
6.4	How closely do you follow all of the lesson steps outlined in the plan and use all of the projectable resources during a <i>Stepping Stones</i> Lesson? If you don't, why do you deviate from the resources?
6.5	How do you encourage student discourse during instruction? How often do you use the questions provided in the teacher notes?
6.6	How do you use the Student Journal? Do you use all of the parts of the Student Journal? Why/why not?
6.7	How often do you use the Maintaining concept and skills work in the journal? How often do you use the projectable Fluency Practice? How often do you use Problem solving or Investigations?
6.8	What kind of feedback do your students receive during instruction? How do you use your observations during instruction to inform your differentiation? How do you use the differentiation resources for small group instruction?

Appendix A: Interview protocol

SSIT Indicator	Interview Question(s) to Elicit Evidence
Assessment	
7.1	How do you record and monitor your students' assessment data?
7.2	What formative data do you collect? How does the data inform your instruction?
7.3	Which assessment resources do you use to collect summative data to evaluate your students' learning? Which <i>Stepping Stones</i> assessments, such as Performance Tasks, Check-ups, Interviews, and Quarterly Tests, do you use? How often?

Appendix B: Student Journal review protocol

Introduction and Overview

The purpose of this document is to provide guidance for staff involved in the *Stepping Stones* Implementation Tool (SSIT) collection of data from a review of Student Journals. The Student Journal can provide valuable information about the level of implementation of the *Stepping Stones* program across a classroom, grade level, or school. The Student Journal Review Protocol is a method for collecting implementation data to measure the level of indicators on the SSIT. The following indicators can be measured through the review of Student Journals:

- 3.1: Understands and applies spaced teaching and practice by teaching the modules and lessons in the order outlined in the *Stepping Stones* scope and sequence.
- 3.2: Includes Maintaining concepts and skills during daily instruction.
- 6.4 Teaches the full lesson (Steps 2–4), including the use of slides, projectables, and all other recommended resources.
- 6.6: Guides students to complete the following sections in the Student Journal: Step In (to summarize the lesson); Step Up (to check for individual understanding); and Step Ahead (to extend thinking) after Step 3 of the lesson has been taught.

Journal reviewers should keep in mind that if portions of the journal are not completed, it does not mean that these practices are not being done. Teachers may be using manipulatives or other hands-on materials or activities to review these concepts. Reviewers should use teacher interviews or observations for information before making a final determination on the indicator ratings. The Student Journal review is one source of evidence to inform the ratings.

Appendix B: Student Journal review protocol

Part I: Student Journal review protocol

Step 1: Sample size

The first step to prepare for the Student Journal review is to decide the sample size. This can affect the reliability of the data, because the larger the sample size, the more reliable the data. Depending on the capacity of the staff and the time available, there is a set of sample sizes that the team may decide on. Examples of sample sizes to consider include:

- 3–5 journals per classroom across all implementing grade levels.
- 5–10 journals from one classroom per grade level.
- All journals from targeted grade levels, for example, all Grade 2 journals.
- All journals from all students in all implementing grade levels.

Step 2: Data collection sheet

Add the following information to each data collection sheet (see Part II) for each classroom sample:

- School name
- Reviewer's name
- Date
- Grade level
- Classroom identifier (if applicable).

Step 3: Review Student Journals

Reviewers should go through the pages of each student journal in the sample to check for completion of the parts of the lesson (Step In, Step Up, and Step Ahead). Remember that the Step In may or may not be completed based on the direction of the classroom teacher. For example, when some teachers use the projectable discussion provided for the Step In, they ask students to keep their journals closed. This means they are not distracted from the lesson or tempted to go ahead. The primary sections to review and document are Step Up, Step Ahead, and Maintaining concepts and skills. For Maintaining concepts and skills, the reviewer should check that the pages with the grey header bar in the even numbered lessons have been completed.

The following provides the scoring based on the completion of the pages within the Step Up, Step Ahead, and Maintaining concepts and skills:

3 points: >80%

2 points: 50–79%

1 point: 25–49%

0 points: <49%

Appendix B: Classroom Student Journal Review Sheet (Form A)

Part II: Data collection forms

The following forms are examples of different methods for organizing the Student Journal data to be analyzed. The reviewer can use the Classroom Student Journal Review Sheet (Form A) to collect individual journal data during the initial collection. Individual data from classrooms can be summarized using the Grade Level Summary Sheet (Form B). The Grade Level Summary by Student Groups Sheet (Form C) allows this information to be further analyzed by student groups. This data should be shared with implementation team to inform the SSIT ratings.

The following scale provides the scoring:

3 points: >80%

2 points: 50–79%

1 point: 25–49%

0 points: <49%

Journal #	Step Up	Step Ahead	Maintaining concepts and skills

Appendix C: Glossary of Terms

Term	Description
ORIGO model for teaching concepts 	<i>ORIGO Stepping Stones</i> introduces symbols gradually and after students have had many meaningful experiences with models, including real objects, classroom materials, and 2D pictures, as shown on the left side of the diagram. Symbols are also abstract representations of spoken words, so students move through distinct language stages as depicted on the right side of the diagram. Additional Resource: https://youtu.be/pyZ0sO5W_XE
Concrete-pictorial-symbolic approach 	The concrete-pictorial-symbolic approach that <i>ORIGO</i> promotes is shown on the left side of the model above. <i>ORIGO Stepping Stones</i> introduces symbols gradually, after students have had many meaningful experiences with models, including real objects, classroom materials, and 2D pictures. Additional Resource: https://youtu.be/pyZ0sO5W_XE

Appendix C: Glossary of Terms

Term	Description
Language stages 	Language is essential in helping students build an understanding of mathematical concepts. There are four stages of language development, and each is crucial to the development of deep understanding. The stages shown on the right side of the ORIGO model for teaching concepts and are detailed below. <u>Student language</u> In the first stage, the program is designed to leverage students' existing natural language to describe concepts. For example, students may use the words <i>eat</i>, <i>break</i>, <i>jump away</i>, <i>swim away</i>, or <i>spend</i> to describe situations involving subtraction. Teachers should use real-world stories and illustrations to encourage the use of this rich and meaningful language to help students build connections between their existing ideas and new concepts. <u>Materials language</u> In the second stage, the students' language broadens as they begin to act out stories and problems using classroom resources. This stage includes language that is exclusive to the resources being used. For example, new language such as <i>cover up</i> or <i>take away</i> may be introduced when using concrete, hands-on resources to act out subtraction stories. Similarly, if pictures are being used, the students may say <i>cross out</i> or <i>erase</i> in the context of subtraction. <u>Mathematical language</u> In the third stage, students begin to exhibit mathematical precision in their language. For example, in the context of subtraction, students will use the term <i>subtract</i>. In reference to two-dimensional shapes, they will start to say <i>vertex</i> to describe what they may have once called a pointy corner. At this stage, the language is often considered to be unique to mathematics. <u>Symbolic language</u> In the final stage, students are introduced to the symbols or notation of that concept. With subtraction, they learn that the subtraction symbol is an abbreviation for all the language used in the previous stages. It is important to note that students do not simply move through the stages. Rather, they begin by using their own natural language, then as the stories are acted out in the classroom, students add to their language and mental picture of the concept. More mathematical and, eventually, symbolic language is added to build a more comprehensive understanding of the concept. Additional Resource: https://youtu.be/6dmcQ1Z1FPo

Appendix C: Glossary of Terms

Term	Description
ORIGO model for teaching skills 	ORIGO believes that students acquire skills over time as they engage in four distinctly different types of activities. Introducing In the first stage, students are introduced to the skill using contextual situations, concrete materials, and pictorial representations to help them make sense of the mathematics. Reinforcing In the second stage, the concept or skill is reinforced through activities or games. This stage provides the opportunity for students to understand the concepts and skills as it connects the concrete and pictorial models of the introductory stage to the abstract symbols of the practice stage. Practicing When students are confident with a concept or skill, they move to the third stage where visual models are no longer used. This stage develops accuracy and speed of recall. Written and oral activities are used to practice the skill to develop fluency. Extending As the name suggests, the fourth stage sees students extend their understanding of the concept or skill. For example, the use-tens thinking strategy for multiplication can be extended beyond the number fact range to include computation with greater whole numbers and eventually to decimal fractions. Additional Resource: https://youtu.be/UEOiaY5XMKk
Stages of strategy development 	The stages of strategy development are Introduce, Reinforce, Practice, and Extend, and are described above. Additional Resource: https://youtu.be/UEOiaY5XMKk
