

Ramon lives on the 19th floor of an apartment building. His grandma lives on the 12th floor of the same building, and his uncle lives on the 37th floor.

When Ramon comes home from school, he drops his backpack off at home, then he goes to his uncle's for dinner. Sometimes, he visits his grandma before going to his uncle's. Ramon uses the elevator and counts the floors as he goes up or down. How many fewer floors does Ramon travel when he does not visit his grandma?
