

A Dozen Dizzy Dinosaurs

A book about division (equal groups)

Aim

Two different models can be used to represent division: partition (sharing) and quotient (measurement or equal groups). *A Dozen Dizzy Dinosaurs* introduces the quotient model for division. These whole-class activities provide students with the opportunity to:

- listen to a story about division
- use materials and pictures to act out grouping situations
- split a dividend between a different number of divisors
- work with remainders
- relate division to multiplication

Activities

To access the teacher's notes for these activities, select the file from the resource tab at the top right of screen.

1. Listening to the story
2. Acting out the story
3. Using materials to act out the story
4. Using the teaching tool to act out the story
5. Writing a story about division
6. Introducing division language
7. Working with different quantities
8. Working with reminders
9. Relating division to multiplication
